A urine analyzer so advanced, it even knows how to read.

With the CLINITEK Status+ Analyzer, Siemens answers the need for more accurate and efficient testing.

usa.siemens.com/clinitekstatusplus

In most medical practices today, there are too many procedures to do and not enough time to do them. The way to solve this is to create a unified relationship between workflow efficiency and testing accuracy.

The CLINITEK Status+ Analyzer automatically reads MULTISTIX reagent strips, saving time and reducing errors.

The Siemens CLINITEK Status+ Analyzer does just that. Using state-of-the-art technology, this CLIA-waived instrument automatically performs and reads multiple tests like urinalysis, pregnancy and microalbumin-to-creatinine ratio. It's faster than manual testing and also reduces the chance for human error. Results can also be sent electronically to your data management system, simplifying record keeping and billing. Your office is busy enough caring for patients. Does it really need extra busywork?
