

Over 8,000 DEATHS from Diphtheria each year!

IN spite of the steady decline of Diphtheria since 1895, the case-rate and death-rate are still unnecessarily high. The situation demands not only better diphtheria prevention campaigns, but earlier and more vigorous treatment.

Diphtheria Antitoxin, Super - Concentrated - Mulford is effectively contributing to the further reduction of the death-rate. It is carefully processed and aged to yield a product of unimpeachable quality . . .

<i>Super-concentrated</i>	<i>Amber clear</i>
<i>Uniformly high potency</i>	<i>Stable</i>
<i>Low protein content</i>	<i>Isotonic</i>
<i>Less viscous</i>	
<i>Less bulk—less pain—quicker absorption</i>	

Supplied in the improved Serum Syringe, with glass-encased sterile needle, permitting rapid assembly and easy injection. 1,000 units, 5,000 units, 10,000 units, 20,000 units.

Diphtheria Antitoxin, Super-Concentrated - Mulford

Prevent Diphtheria!

Now is the time to immunize children, of pre-school age, since they are more susceptible to diphtheria and their morbidity and mortality rate is highest.

Diphtheria Toxoid is best suited for immunization:

1. Toxoid is more stable than T-A Mixture.
2. Toxoid gives less reactions particularly in young children.
3. Toxoid requires but two injections, T-A mixture requires three.
4. Toxoid retains its antigenic value (potency) for eighteen months; T-A Mixture five to six months.
5. Toxoid retains its potency if frozen or heated to 95° F. T-A Mixture should be kept at 40 to 50° F. and should not be used if frozen.
6. Toxoid contains no alien horse, goat or sheep serum, therefore patients cannot be sensitized to the proteins contained in animal sera.

Every effort should be exerted by protective immunization with Diphtheria Toxoid to wipe out diphtheria.

Diphtheria Immunization Leaflets for enclosure by the physician in his bills, statements or for distribution, without advertisement or firm mention, will be furnished free in any desired quantities, together with sample of Diphtheria Toxoid (one immunization) and Vaccine Virus.

Mail Small Pox Vaccine and Diphtheria Toxoid per adv. in Journal A.M.A.
