36 Clinics from the Massachusetts General

The great October Number of the *Surgical Clinics of North America* brings you the latest surgical developments from the Massachusetts General Hospital. There are no less than 36 separate clinics in this number, and they include original surgical technics never before published, highly interesting case reports, end-result studies and other discussions—all of them giving you invaluable authoritative advice on your particular problems.

Among the titles of these clinics you will find these: Carcinoma of the Large Intestine; Current Practices in the Surgical Treatment of Ulcer; Some Recent Developments in Plastic Surgery; Carcinoma of the Breast; Cancer; Timing as a Factor in the Treatment of Shock; Splenectomy in Portal Hypertension; Ruptured Cervical Disks; Ureteral Splints; Hallux Valgus, Weak Foot and the Keller Operation; and Therapy and Prophylaxis of Venous Thrombosis and Pulmonary Embolism. Amplifying the text are 163 illustrations on 95 figures and 27 useful tables.

With a year's subscription to the *Surgical Clinics of North America* you start with this valuable October Number and then receive five more bimonthly books of postgraduate surgery from other great medical centers of America. This means that you'll be in touch with latest surgical developments throughout the country, because the *Surgical Clinics of North America* bring you the new things in surgery while they are still new.

tell the story...

Clinical tests* showed that when smokers changed to PHILIP MORRIS Cigarettes, substantially every case of irritation of the nose and throat due to smoking cleared completely or definitely improved.

**Laryngoscope, Feb. 1935, Vol. XLV, No. 2—149-154.*

TO THE PHYSICIAN WHO SMOKES A PIPE: We suggest an unusually fine new blend—COUNTRY DOCTOR PIPE MIXTURE. Made by the same process as used in the manufacture of Philip Morris Cigarettes.

A Simplified tube for INTESTINAL INTUBATION

THE CANTOR TUBE is a latex bag-tipped, mercury weighted single lumen tube. It is 18 Fr. and 10 feet long. Its movement down the alimentary tract is actuated by a combination of free-flowing qualities of the mercury and the peristaltic action on the bolus formed by the mercury in the bag. Mercury is given the maximum motility by the loose latex bag attached distal to the tube. It is the only tube

utilizing all the physical properties of mercury.

Tubes are marked as follows to indicate their position: "S" for stomach at the 17" mark, "P" for pylorus at the 24" mark, "D" for duodenum at the 30" mark, then in feet at the 4, 5, 6, 7, 8 and 9 feet marks.

Secondary dilatation of the stomach can be decompressed by withdrawing the tube a short distance, cutting holes into the tube, and allowing the tube to be pulled down by peristalsis at which point the holes will open to the stomach which, on applying suction, will be decompressed. Replacement latex bags are easily cemented to the tube.

D-110 CANTOR INTESTINAL DECOMPRESSION TUBE, 18 Fr., 10 feet long, with bag attached, with instructions for use. Each \$7.50

The CANTOR TUBE—

D-110/R LATEX BAG for Cantor Intestinal Decompression Tube, with instructions for replacement of bag (With each dozen bags one tube of D-110/C Cement is supplied without charge). Each \$8.60 Dozen \$6.00

D-110/C RUBBER CEMENT for attaching replacement bags to the Cantor Tube. Each \$.25 Dozen \$2.50

Order from your Surgical Supply Dealer

Described by Dr. Meyer O. Cantor, Detroit, American Journal of Surgery, July 1946; April and June 1947.
